

CORPORATE ENVIRONMENT RELIABLE FLEXIBILITY.

Building infrastructure in the corporate environment encompasses a wide variety of MEP system options ranging from economical fixed solutions to complex and flexible BMS controlled equipment. In addition, systems must be designed to accommodate the fluid dynamics of the tenant expansion and “restacking” process and taken into consideration prior to construction. A successful project team can identify these various factors, communicate effectively with each other and provide the insight required for accurate executive level decisions.

FEATURED PROJECT

SAP AMERICA

NEWTOWN SQUARE, PENNSYLVANIA

As the market leader in enterprise application software, SAP is at the center of today's business and technology revolution. Our innovations enable more than 293,500 customers worldwide to work together more efficiently and use business insight more effectively. FXB provided MEP engineering services to expand the Newtown Square office facility.
